Time Tracker

Expanding a profitable business means keeping operation costs lean and manual processes automated to maintain scalability. Manual administration and paper trail, associated with work schedules, time sheets and orders, often bring higher headcount and human errors, as well as consuming time in locating workers and verifying time sheets. Management's lack of insight into the field operations and changing priorities causes inaccurate data reporting, potentially making a difference between profits and losses.

YOUR BENEFITS AT A GLANCE

Reduce manual administration: eliminate paper record-keeping for your drivers by automating their work hours, trip mileage and fuel consumption logs.

Manage projects in real-time: access a continuous data feed from the work field, such as billable hours, drive time, mileage, fuel consumption, and get insight into actual project costs, revenue and timelines.

Simplify complex tasks: Time Tracker is able to calculate work and travel times with complex rules and regulations.

Define behaviour patterns: Time Tracker learns each driver's activity patterns, as per location and travel, to automatically log the duration of each activity type in their time sheet.

Improve billing accuracy: precision in defining work and travel times enables you to generate accurate invoices, reduce lost billable hours and avoid payroll overhead costs.

Planned vs actual project timelines and costs: review how your projects are performing live in comparison to the forecasted goals.

Easily locate your workforce in the field: track your vehicles and workforce remotely.

OUR SOLUTION

Time Tracker is a cost-effective solution, designed to streamline mobile workforce management. It automates employee time sheets, estimates project costs and timelines, and improves billing accuracy and resource utilization. Time Tracker enables managers to identify efficiency gaps, improve workload distribution and lower overtime costs. Workers are no longer required to manually record driving time, mileage and the time spent on a job site, saving time on paperwork while staying on top of protocols.

HOW IT WORKS

Time Tracker app is installed on any smartphone device and, after the initial driver input, starts developing the user's behavioural profile, automatically logging actual work hours and driving time. The app recognizes the difference between personal errands and work-related vehicle use, using device location, duration of a stop and previous behaviour patterns with optimal accuracy.

Project and fleet managers are able to easily access this information to monitor the performance of every resource assigned to a project, individually or as a crew, and provide accurate productivity and cost analysis reports to the business owners.
